

Challenges:

One of the biggest challenges Premier Modular Group faces around sustainability is ensuring the use of eco-friendly materials and practices throughout the entire construction process. The business is committed to minimizing its environmental impact and promoting sustainable solutions.

To achieve this, Premier Modular Group focuses on several key areas. Firstly, they prioritize the use of sustainable materials, such as responsibly sourced timber and recycled steel and plasterboard. By selecting these materials, they reduce the carbon footprint of the buildings.

Secondly, Premier Modular Group implements energy-efficient design principles. They incorporate additional features such as solar panels, energy-efficient lighting, and insulation to help reduce energy consumption in the modules. This not only lowers operational costs but also minimizes greenhouse gas emissions.

Furthermore, Premier Modular Group (PML) is dedicated to waste reduction and recycling. They implement waste management strategies, such as segregating and recycling construction waste along with the waste produced in the office space. Additionally, they explore innovative ways to reuse and repurpose materials, promoting a circular economy approach.

By addressing these challenges, Premier Modular Group demonstrates its commitment to sustainability and contributes to a greener future in the construction industry.

Impact:

Engagement events:

Engagement events from the school have had a positive impact on Premier Modular Group as they provide an opportunity for the business to connect with other industry professionals and learn about the latest sustainability trends. By participating, the business can gain valuable insights and knowledge about new materials, technologies, and strategies that can help to further improve existing sustainable practices. This can include exploring alternative materials with lower environmental impacts.

Services

Premier Modular Group delivers high quality modular buildings for public and private sector organisations across the UK and Europe.

About

Premier Modular Group is a leading modular construction company based in the UK. The business specialises in designing and building high quality, sustainable modular buildings for various industries (e.g. education & health sectors). With an innovative approach, PMG provides efficient and cost-effective solutions for construction projects.

Overall, the engagement events available through the school can inspire and empower Premier Modular Group to continuously enhance its sustainability efforts, stay ahead of industry trends, and contribute to a more sustainable future.

Resources:

Assessments – The assessments available within the school provide a tangible way to measure the impact of the courses on Premier Modular Group's sustainability efforts. They allow the business to track the progress and growth of employees' understanding of sustainable issues while being very easy to navigate through the online portal.

Action plan – The action plan available has proven to be very useful as it provides a clear roadmap and sets specific goals for employees to follow, enabling the tracking of progress.

E-learning module - The e-learning modules offer a wealth of knowledge and resources to enhance the understanding of various topics provided by the school. They allow for development within a busy schedule as they can be completed online and at the employee's convenience.

Value gained:

Premier Modular Group has experienced several benefits by being part of the school. It has allowed the business to gain a deeper understanding of sustainable practices, given the opportunity to collaborate with industry peers, and has contributed to the improvement of the company's reputation. Overall, it has enhanced PML's sustainability knowledge and efforts, fostered innovation, and positioned the company as a responsible employer within the modular build industry.

Future proofing:

At Premier Modular, they aim to deepen their engagement by actively participating in workshops, webinars, and networking events. They also plan to leverage the school's resources to further enhance their sustainability practices and collaborate with industry experts where possible to ensure they are constantly looking at new ways to thrive.
